

Environmental Behavior. SOME, S.A.U. 2025

ACTIONS CARRIED OUT DURING 2025

Control of the carbon footprint During 2025, efforts have been made to control the carbon footprint of productive activities, products and suppliers.

ENVIRONMENTAL PERFORMANCE

During 2025, 6 environmental incidents have been opened, one of which came from the external audit as non-conformity. Of the 5 that have been managed effectively, having an average period of 3 months before, they have not been closed.

Below are the data on consumption and waste generation, in percentages relative to previous years.

Keep in mind that when 100 is indicated, it means that we started from a value of 0 in the previous year, consumption or waste has been generated again in that year.

Turnover

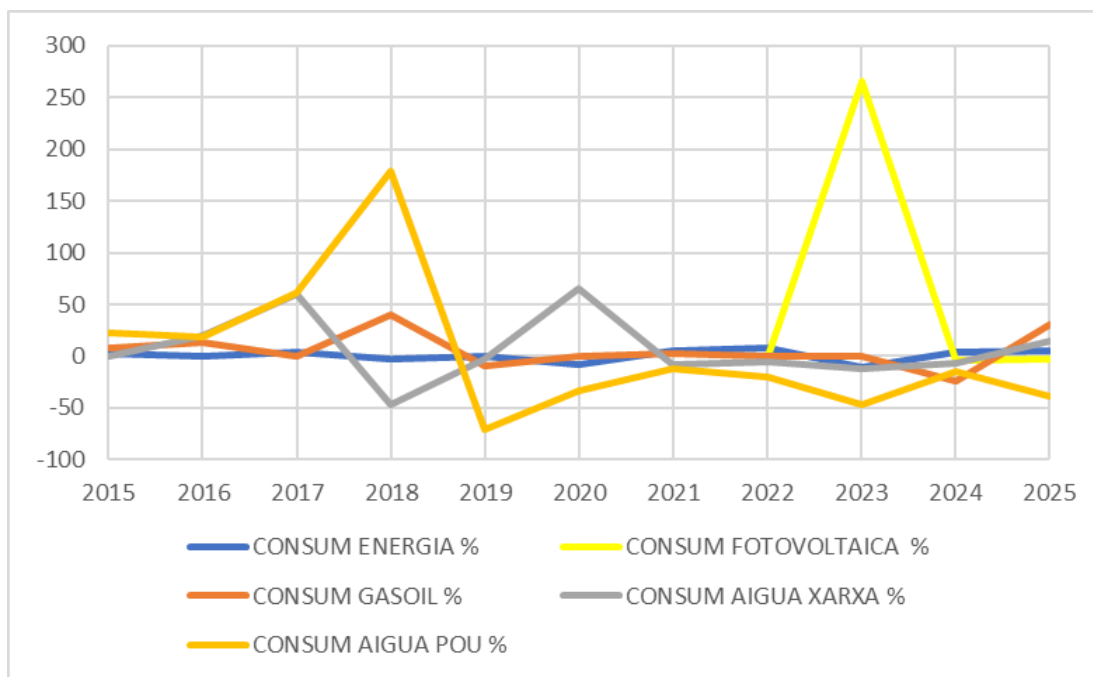

As for turnover, we can see its evolution over the years, in percentage values relative to the evolution with respect to the previous year.

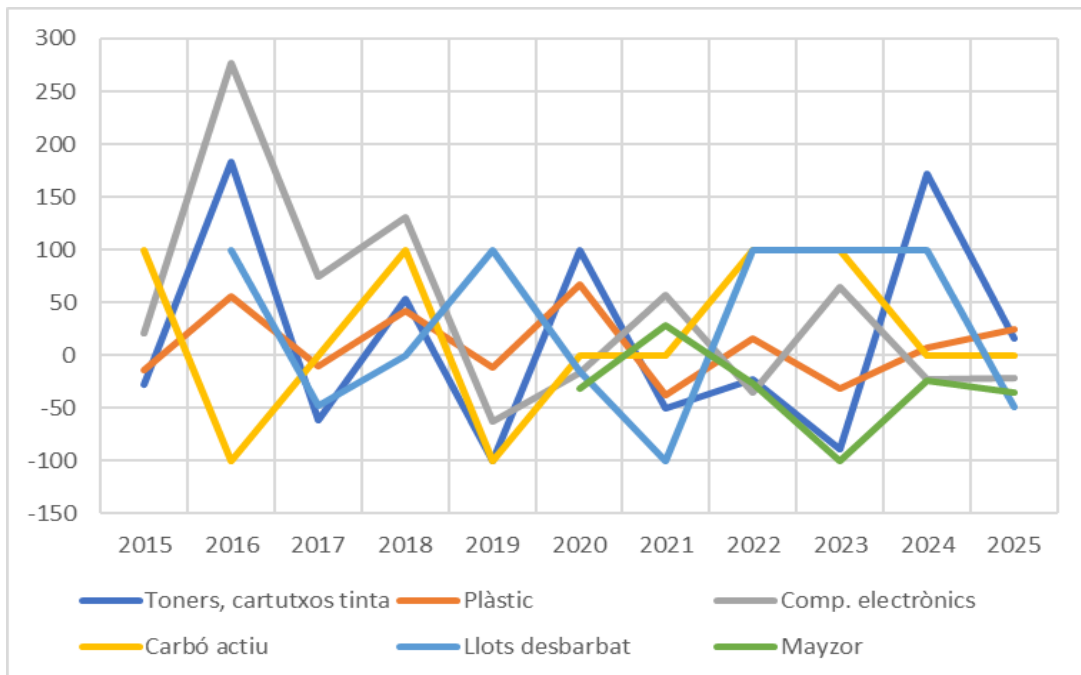

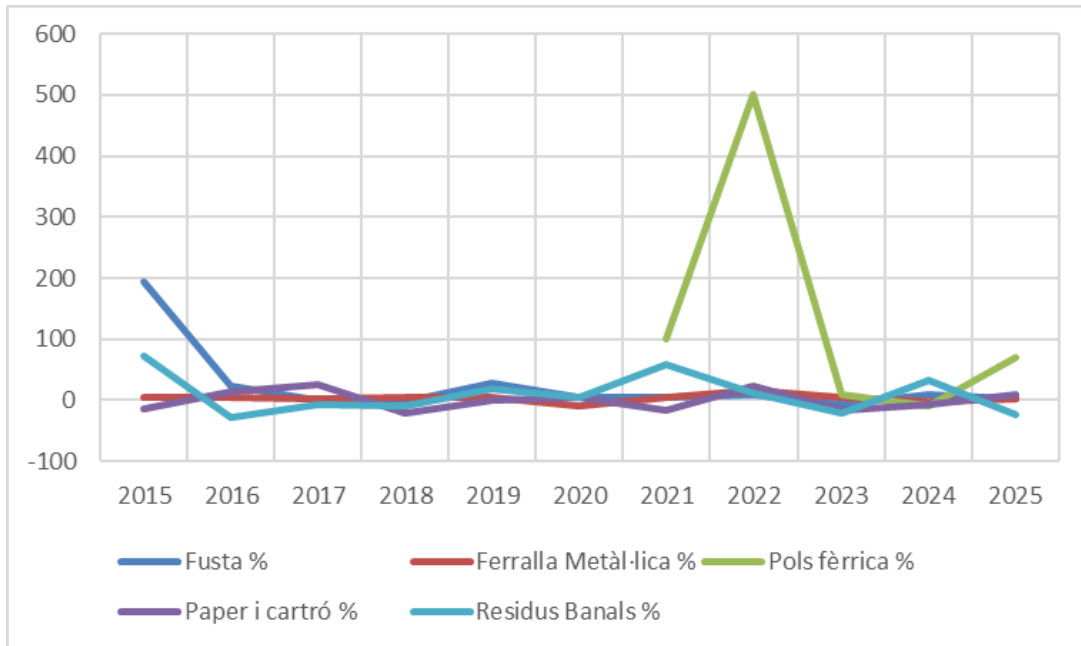

Graphs of historical variations in consumption and waste generation.

Below are the graphs of the variations in consumption and waste generation in percentage values relative to the evolution with respect to the previous year, with which we can see the increases and decreases.
